

MEGAMAN[®]

LAMP DIMMING

120V

TRIAC/
Incandescent
OK

TRIAC and LED
specific much
better!

*Incorporates a
low-end trim adjust-
ment - available from
many control mfgs.*

12V

Electronic Low
Voltage Fixture
=
ELV Dimmer

*Confirm operating
range of transformer
within the fixture*

Magnetic Low
Voltage Fixture
=
MLV Dimmer

*Typically excellent
compatibility with no
minimum load issues*

- Megaman lamps are designed to dim to 1%, however, 10% dimming is published because of variables with field conditions and equipment.
- 0-10V Dimming is being driven by the fixture; consult fixture manufacturer for additional guidance.
- In most instances, upgrades of installations with professional dimming systems (churches and auditoriums) require programming and/or hardware changes to ensure long-term success with LED lamps.
