3. Max Run refers to the total number of Slot Luminaires that can go on a Driver; if exceeded, damage to the Driver and Luminaire may result
- Lengths are calculated with 24V DC at the start of the luminaire series. Voltage drop may occur if not using proper wire gauge; refer to the Voltage Drop and Wire Length Distance chart (right)
 - The lengths above are calculated with no more than 30% light loss from the start of the series to the end of the series for optimal light consistency. If run lengths are extended beyond the recommended lengths noted above, there will be inconsistent light output and voltage drop.

24V VOLTAGE DROP/WIRE LENGTH

This chart provides general guidelines for determining the wire gauge to be used based on total load and distance from the Driver to the beginning of the Slot Luminaire run, allowing a 3% voltage drop

DIMMING SPECIFICATIONS

LED Drivers have been tested with the following Dimmer Models

FORWARD PHASE DIMMING

Incandescent 120V AC Dimmers adjust the light with forward phase control, where the Dimmer “chops” the forward part of the AC wave to deliver less or more power to the light source. No neutral wire connection required.

MANUFACTURER	PRODUCT	MODEL
Leviton	SureSlide	6672, 6674, 6674N, 66DF
	Decora Smart	D26HD, D2MSD, DN6HD
	Decora Digital	DDL06-1, DDM06, DDL06-1, DDMX1
	Decora Slide	DSL06, DSM10
	Illuminatech	IPL06
	Trimatron Rotary	RDL06, RNL06

	Maestro	MACL-153M
	Skylark	SCL-153P
Legrand	Toggler	TGCL-153P
	Adorne	ADTP703TU, ADPD153L

REVERSE PHASE DIMMING

Electronic Low Voltage 120V AC Dimmers adjust the light with reverse phase control, where the Dimmer “chops” the back part of the AC wave to deliver less or more power to the light source. Neutral wire connection required.

MANUFACTURER	PRODUCT	MODEL
Leviton	Decora Digital	DDE06
Lutron	Diva	DVELV-300P-WH
	Skylark	SELV-300P-WH

0-10V DIMMING

0–10V DC Low Voltage Dimmers operate using two (2) low voltage dimming wires separate from the 120V or 277V AC power. The Dimmer sends a variable output voltage to the luminaire based upon the dimming level. Dimming operation is controlled with the 0–10V DC low voltage wiring connection between the Dimmer and the Driver. The control signal runs on two (2) low voltage control wires color coded violet and pink/gray.

MANUFACTURER	PRODUCT	MODEL
Leviton	IllumaTech	IP710-DLX, IP710-LFZ
Lutron	Diva	DVSCSTV, DVSCTV, DVSTV, DVTV, DVTV-WH

- Testing has been performed on these Dimmers, but this does not imply any warranty of compatibility
- Dimming performance can be influenced by different loads as well as variations in Dimmer switches within the same model
- Dimmer maximum load rating with LEDs may differ from published traditional source Dimmer ratings; consult manufacturer for maximum Dimmer information
- Consult factory for additional dimming information
